EMERGENCY ACTION PLAN FOR ATHLETICS

Introduction
Emergency situations may arise at any time during athletic events. Expedient action must be taken in order to provide the best possible care to the sport participant’s emergency and/or life threatening conditions. The development and implementation of an emergency plan will help ensure that the best care will be provided.

As emergencies may occur at any time and during any activity, all school employees and sports medicine teams must be prepared. This preparation involves formulation of an emergency plan, proper coverage of events, maintenance of appropriate emergency equipment and supplies, utilization of appropriate emergency medical personnel, and continuing education in the area of emergency medicine and planning. Through careful pre-participation physical screenings, adequate medical coverage, safe practice and training techniques, and other safety avenues, some potential emergencies may be averted. However, accidents and injuries are inherent with sports participation, and proper preparation on the part of the sports medicine team should enable each emergency situation to be managed appropriately.

Components of the Emergency Plan
These are the basic components of every emergency action plan for athletics:

1. Emergency Personnel
2. Emergency Communication
3. Emergency Equipment
4. Roles of Licensed Athletic Trainers, Student Trainers, Coaches, and Administrators
5. Venue Directions

Emergency Plan Personnel
With athletic practice and competition, the first responder to an emergency situation is typically a member of the athletic staff, most commonly a coach or athletic trainer. The type and degree of sports medicine coverage for an athletic event may vary widely based on such factors as the sport or activity, the setting, and the type of training or competition. Certification in cardiopulmonary resuscitation (CPR), athletic safety, prevention of disease transmission, and emergency plan review is required annually for all athletics personnel associated with practices, competitions, skills instruction, and strength and conditioning.

The development of an emergency plan cannot be complete without the formation of an emergency team. The emergency team may consist of a number of healthcare providers including physicians, emergency medical technicians, certified athletic trainers, student athletic trainers, coaches, parents, and, possibly other athletes and bystanders. When forming the emergency team, it is important to adapt the team to each situation or sport. It may also be advantageous to have more than one individual assigned to each role. This allows the emergency team to function even though certain members may not always be present. The roles of these individuals within the emergency team may vary depending on
various factors such as the number of members of the team, the athletic venue itself, or the preference of the head coach or head athletic trainer.

### Roles within the Emergency Team

1. Establish scene safety and immediate care of the athlete
2. Activation of the Emergency Medical System
3. Emergency equipment retrieval
4. Direction of EMS to scene

There are four basic roles within the emergency team. The first and most important role is establishing safety of the scene and immediate care of the athlete. Acute care in an emergency situation should be provided by the most qualified individual on the scene. In instances that an athletic trainer is available, this role will be assumed by the athletic trainer.

The second role, EMS activation, may be necessary in situations where emergency transportation is not already present at the sporting event. This should be done as soon as the situation is deemed an emergency or a life-threatening event. Time is the most critical factor under emergency conditions. Activating the EMS system may be done by anyone on the team. However, the person chosen for this duty should be someone who is calm under pressure and who communicates well over the telephone. This person should also be familiar with the location and address of the sporting event.

### Activating the EMS System

**Making the Call:**

911

**Provide Information:**

- Name, address, telephone number of caller
- Nature of emergency
- Number of athletes
- Condition of athlete(s)
- First Aid treatment initiated
- Specific directions as needed to locate the emergency scene (i.e. “Faculty parking lot near Main Street”)
- Other information as requested by dispatcher

The third role, equipment retrieval may be done by anyone on the emergency team who is familiar with the types and location of the specific equipment needed. Student athletic trainers, coaches, and athletes are good choices for this role.

The fourth role of the emergency team is that of directing EMS to the scene. One member of the team should be responsible for meeting emergency medical personnel as they arrive at the site of the emergency. Depending on ease of access, this person should have keys to any locked gates or doors that may slow the arrival of medical personnel. A student athletic trainer, administrator, athlete, or coach may be appropriate for this role.

### Emergency Communication

Communication is the key to quick emergency response. Athletic trainers and emergency medical personnel must work together to provide the best emergency response capability and should have contact information established as a part of pre-planning for emergency situations. Communication prior to the event is a good way to establish boundaries and to build rapport between both groups of professionals. If emergency medical transportation is
not available on the site during a particular sporting event then direct communication with
the emergency medical system at the time of injury or illness is necessary.

Access to a working telephone or other telecommunications device, whether fixed or mobile,
should be assured. The communications system should be checked prior to each practice or
competition to ensure proper working order. A back-up communication plan should be in
effect should there be failure of the primary communication system. The most common
method of communication is a public telephone. However, a cellular phone is preferred if
available. At any athletic venue, whether home or away, it is important to know the location
of a workable telephone. Pre-arranged access to the phone should be established if it is not
easily accessible.

**Emergency Equipment**

All necessary emergency equipment should be at the site and quickly accessible. Personnel
should be familiar with the function and operation of each type of emergency equipment.
Equipment should be in good operating condition and personnel must be trained in advance
to use it properly. Emergency equipment should be checked on a regular basis and its use
rehearsed by emergency personnel. The emergency equipment available should be
appropriate for the level of training for the emergency medical providers. Creating an
equipment inspection log book for continued inspection is strongly recommended.

It is important to know the proper way to care for and store the equipment as well.
Equipment should be stored in a clean and environmentally controlled area. It should be
readily available when emergency situations arise.

**Medical Emergency Transportation**

Emphasis should be placed at having an ambulance on site at high risk sporting events. In
the event that an ambulance is on site, there should be a designated location with rapid
access to the site and a cleared route for entering/exiting the venue. If an ambulance is not
present at an event, entrance to the facility should be clearly marked and accessible. In the
event of an emergency, the 911 system will still be utilized for activating emergency
transport.

In the medical emergency evaluation, the primary survey assists the emergency care
provider in identifying emergencies requiring critical intervention and in determining
transport decisions. In an emergency situation, the athlete should be transported by
ambulance, where the necessary staff and equipment is available to deliver appropriate
care. Emergency care providers should refrain from transporting unstable athletes in
inappropriate vehicles. Care must be taken to ensure that the activity areas are supervised
should the emergency care provider leave the site in transporting the athlete. **Emergency
situations where there is impairment in level of consciousness (LOC), airway, breathing,
circulation (ABC), or neurovascular compromise should be considered "load and go"
situations and emphasis placed on rapid evaluation, treatment and transportation.**

**Non-Medical Emergencies**

For the following non-medical emergencies: fire, bomb threats, severe weather and violent
or criminal behavior, refer to the school district’s emergency action plan.
**Safety Drill**
All Clear Creek Independent School District sports teams are required to do an annual safety drill. This drill shall be completed prior to the end of the first six weeks and/or the first competition. The drill will include all components of the emergency action plan and/or team and be documented by the head coach.

**Conclusion**
The importance of being properly prepared when athletic emergencies arise cannot be stressed enough. An athlete's survival may hinge on how well trained and prepared athletic healthcare providers are. It is prudent to invest athletic department “ownership” in the emergency plan by involving the athletic administration and sport coaches as well as sports medicine personnel. The emergency plan should be reviewed at least once a year with all athletic personnel. Through development and implementation of the emergency plan, the Clear Creek Independent School District helps ensure that the athlete will have the best care provided when an emergency situation does arise.
*Below is a sample of a site based EAP which is to be posted at all facilities.*

Clear Creek High School Emergency Procedure  
Carlisle Fieldhouse

**Non-Urgent**  
1. Contact Athletic Trainer or School Nurse  
2. Contact Parent

**Urgent**  
1. Call 911  
2. Instruct EMS to report to:  
   Carlisle Fieldhouse  
   Clear Creek High School  
   2305 East Main  
   League City, Texas 77573

   Instruct the EMS to enter the facility by turning off of FM 2094 at the traffic light at Veterans Memorial Stadium. The Carlisle Fieldhouse is located directly past Veterans Memorial Stadium.  
3. Send appropriate personnel to meet and direct EMS personnel into the building from the parking lot.  
4. Provide necessary information to EMS personnel.  
5. Provide appropriate emergency care until the arrival of EMS personnel.  
6. Contact Parent  
7. Contact Athletic Trainer/Campus Coordinator/Principal  
8. Contact Security/Galveston County Sheriff Campus Officer

**LOCATION(s) OF AED**  
1. Hallway on east side of gym next to the training room.  
2. Building in hallway next to the nurse’s office.

**Emergency Phone Numbers**

Below is a sample of a site based Safety Drill Checklist for all facilities.

Clear Creek ISD Athletic Safety Drill Checklist

Date of Drill: _____________________  Time of Drill: ___________________

School: _________________________  Coach: _______________________

Team: ____________________________ (ie. Freshman A, Sophomore, JV, all)

Situation: An athlete has been participating in drills when suddenly collapses and
is lying on the ground unconscious.

1. Athlete care given by: ________________________________

2. EMS activated by: ________________________________

3. AED retrieved by: ________________________________

4. Athletic Trainer/Nurse contacted by: ________________________________

5. EMS met at designated area by: ________________________________

6. Crowd control handled by: ________________________________

7. Parent contacted by: ________________________________

8. Galveston County Sherriff (campus security) contacted by: ________________

An AED was retrieved and available for use within __________________ minutes.
Important note: CCISD’s acceptable response time for an AED is 5 minutes.
