

# ROBOTICS EVENT CENTER

## CCISD Learner Support Center

Less than a mile from NASA Johnson Space Center, the Clear Creek Independent School District's Robotics Event Center is the largest dedicated VEX competition facility of its kind in the United States.

In the heart of the Clear Lake area of Houston, teams from South East Texas love this centrally located facility where 25 EX Robotics Competition, VEX IQ Challenge, VEX U, and VEX AI events were held in the 2020-2021 season. Teams from San Antonio, Austin, Dallas-Fort Worth, Baton Rouge and New Orleans are all less than a 7-hour drive. With two major airports, Houston is also a 4-hour flight from anywhere in the country and a warm respite for teams during the cold winter months of the majority of the VRC season.

with four semi-permanent elevated arenas under professional lighting, the team experience is unlike any other. Teams also enjoy multiple pit display arrays throughout the venue, as well as projected livestreaming with full audio to the main pit area, which means teams never miss a moment of the action.

22' projection screens are just the start of the elevated audience experience. With multiple 75" screens over each field, the audience has a full overhead camera view during matches with live scoring for each playing field. Nearly 30 cameras and multiple [livestreams](#) means the audience at home will never miss a match either, even during multiple division events.

The Space City High School tournament is a can't-miss for teams from all over the state of Texas and Louisiana each season, with teams from four regions playing in the event annually. This past season's events attracted teams from 11 different competition regions across 8 states: from Florida, Connecticut and even South Dakota.
